STUDIO MAÇON · handover · September 2026

# ADS & TRACKING FOR THE NEW SITE

When the new website replaces Wix, Meta (Facebook/Instagram) and Google need to keep **knowing about our products** and **hearing when someone buys**. Otherwise the ads get worse and we can't see what's working.

**Claude has already built the website side.** This guide is the part only we can do, because it needs our logins. There are **13 steps** in 4 short stages. Each step says **who** does it.

**The only rule that really matters:** do **Stage 1 now**, and **Stages 2–3 on the day the site switches** — not before. (Before the switch, studiomacon.co is still Wix, so the new links would lead nowhere.)

# STAGE 1 · NOW

About 30 minutes. Safe to do today; nothing visible changes.

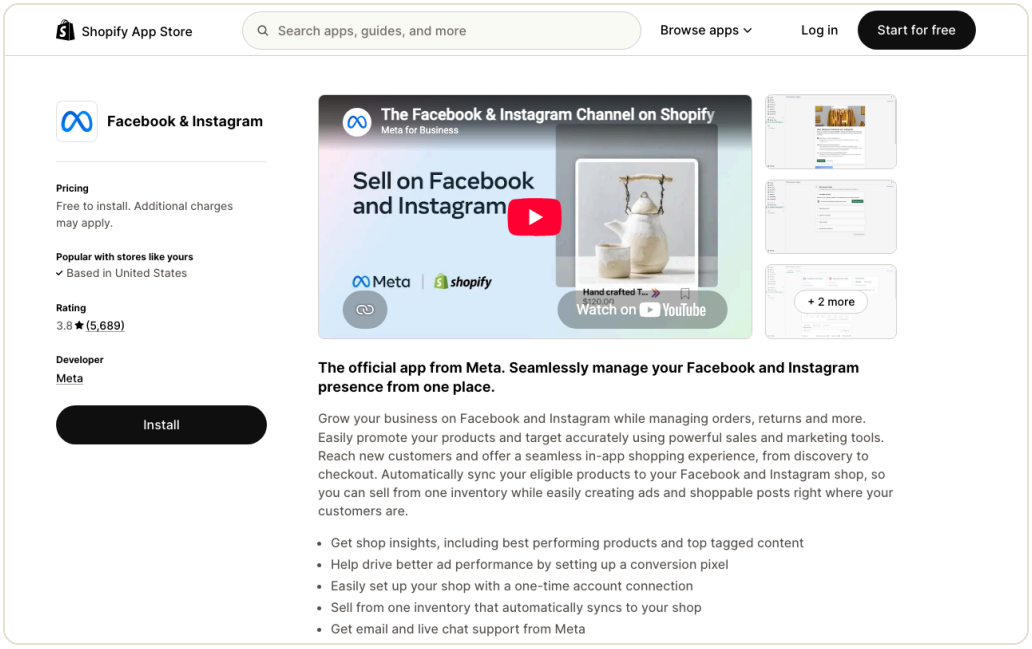

---

**1** HANNAH

## Install Shopify's “Facebook & Instagram” app

1. Open apps.shopify.com/facebook and click **Install**.
2. Log in with the **Facebook account that runs Studio Maçon's ads**.
3. When it asks about a **Pixel**: pick the one that already exists, ending in **…574699**. **Do not make a new one** — that would start the ad history from zero.
4. When it asks about **data sharing**: choose **Maximum**.
5. If it offers to make a **catalog**: say yes. (That's normal — we use it in Step 6.)

> **Why:** purchases happen on Shopify's checkout page. This app is what tells Meta “someone bought something”.

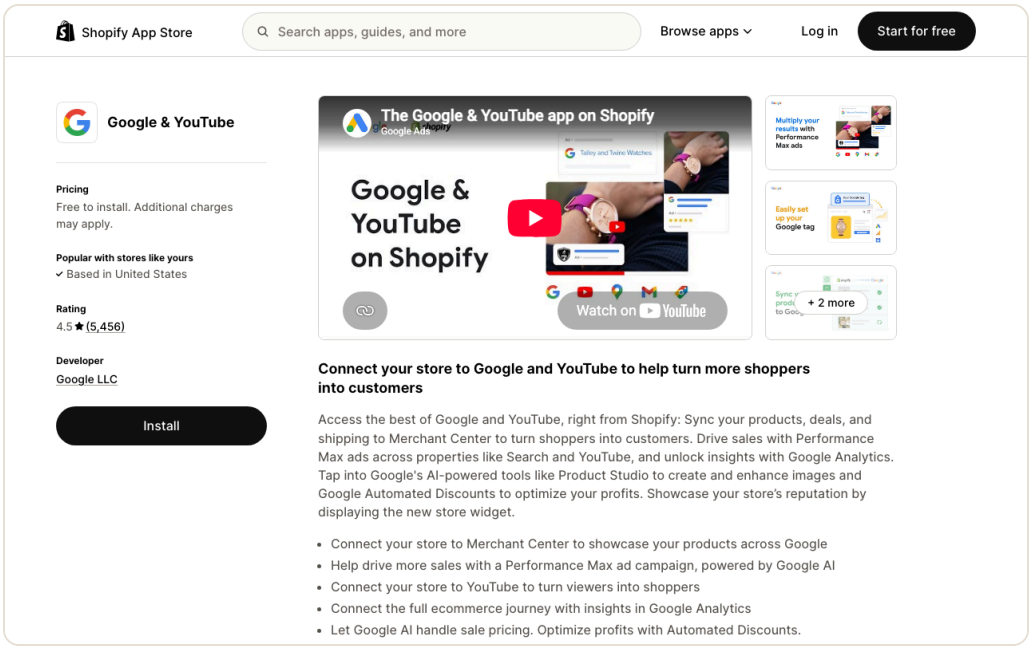

2

HANNAH

## Install Shopify's “Google & YouTube” app

1. Open apps.shopify.com/google and click **Install**.
2. Log in with the **Google account that owns Studio Maçon's Google Ads and Analytics**.
3. Connect **Google Analytics** → choose the one called **G-B5GNGQ1WME**.
4. Connect **Google Ads** → choose account **AW-16466703173**, and switch **conversion tracking** on.
5. If it asks about **Merchant Center**: connect it, but **skip adding products for now** (we do that in Step 8).

> **Why:** same as Step 1, for Google. Without it, Google never hears about sales.

3

HANNAH

## Leave the ads alone for now

If Meta pops up *“Removing catalog may lead to a higher cost…”* click **Keep**. The old **Wix catalog** keeps working until the day we switch the website. Nothing to change yet.

# STAGE 2 · SWITCH DAY

On the day studiomacon.co moves to the new site. About 45 minutes.

---

**4**

CLAUDE + ALEX

## Switch studiomacon.co to the new site

**Alex says "go"**, Claude points the address at the new site (about 5 minutes).

**Check:** open studiomacon.co on your phone and computer. You should see the new site. If you still see Wix, wait 15 minutes and try again.

---

**5**

HANNAH

## Give Shopify the product photos

1. Shopify admin → **Products** → **Import**.
2. Choose the file `product-images.csv` (Alex has it — it's in the site folder under `shopify/`).
3. Tick **"Overwrite products with matching handles"** → **Import**.

> **Why:** so the checkout page shows each piece's photo. It only works after Step 4, because the photos live on studiomacon.co.

6

HANNAH

## Point Meta's catalog at the new site

1. Open business.facebook.com/commerce (Commerce Manager).
2. Click the catalog **the Shopify app made** in Step 1 (probably called *"Products for Maçon"*).
3. Left menu → **Catalog** → **Data sources**.
4. Find **Supplementary feeds** → **Add** → **Scheduled feed**.
5. Paste this address: `https://studiomacon.co/meta-catalog.csv`
6. Repeat: **Daily**. Currency: **USD**. Save.

> **Why:** Shopify's app makes links that go to a locked Shopify page. This file fixes every product so its link and photos point to **studiomacon.co**. Here's a peek at what's inside (Claude made it; it updates itself):

| Piece | Price | Stock | Link | Photo |
|---|---|---|---|---|
| Pip | 220.00 USD | in stock | `studiomacon.co/pip.html` | `…/pip/hero.jpg` |
| Rebi | 220.00 USD | in stock | `studiomacon.co/rebi.html` | `…/rebi/hero.jpg` |
| Ren | 220.00 USD | in stock | `studiomacon.co/ren.html` | `…/ren/hero.jpg` |
| Zuma | 220.00 USD | in stock | `studiomacon.co/zuma.html` | `…/zuma/hero.jpg` |

If you can't find "Supplementary feeds": use **Add items** → **Data feed** with the same address instead. That works too.

7

HANNAH

## Move the ads to the new catalog

1. Open Ads Manager and open each ad that shows products.
2. Find **Product data** (where it currently says *"Wix Catalog for 749cc443…"*).
3. Change it to the **Shopify catalog** from Step 6. Save / Publish.

> **Why:** the Wix catalog stops updating once Wix is off.

8

HANNAH

## Give Google the product list

1. Open merchants.google.com → **Products** → **Data sources** (or **Feeds**).
2. **Add product source** → **Add products from a file** → **Enter a link**.
3. Paste: `https://studiomacon.co/google-products.xml`
4. Fetch: **Daily**. Country: **United States**. Save.

# STAGE 3 · CHECK IT WORKS

Same day, right after Stage 2. About 15 minutes.

---

**9** HANNAH

## Check Meta is hearing the site

1. Open Events Manager → click the pixel **…574699** → **Test events**.
2. Type `studiomacon.co` → **Open website**.
3. On the site: look at a piece → **Add to bag** → **Checkout** (you can stop before paying).
4. Back in Events Manager you should see these appear, in this order:

   PageView · ViewContent · AddToCart · InitiateCheckout

"Purchase" shows up when someone really buys (it comes from the Shopify app in Step 1).

---

**10** HANNAH

## Check the domain is still "Verified"

Business settings → Brand safety → Domains → **studiomacon.co** should say **Verified** (green). Claude copied the verification code over from Wix, so it should stay green.

---

**11** HANNAH

## Check Google is hearing the site

Google Analytics → **Reports** → **Realtime**. Open studiomacon.co on your phone: you should show up as "1 user" within a minute.

---

**12** HANNAH

## Check the catalog has no errors

Commerce Manager → your catalog → **Items**. You should see **69 items** (17 pieces; rings count once per size). Open **Issues**: anything red, send a screenshot to Claude.

# STAGE 4 · A WEEK OR TWO LATER

Only when everything in Stage 3 looks right.

13

HANNAH

## Tidy up Wix (1–2 weeks after the switch)

1. Only once Steps 9–12 all look good.
2. Commerce Manager: open the **Wix Catalog for 749cc443…** → Settings → **Delete catalog** (check no ad still uses it first).
3. Wix dashboard → **Marketing integrations** → disconnect Facebook and Google.
4. Then cancel the Wix plan. **Don't cancel the domain** — it's at GoDaddy, not Wix, and it's fine.

# CHEAT SHEET

The numbers you might be asked for.

| | |
|---|---|
| Meta Pixel | `501136812574699` |
| Meta domain verification code | `ae0yp3uhbruy2um27iahgcmha7bnph` |
| Google Analytics | `G-B5GNGQ1WME` |
| Google Ads | `AW-16466703173` |
| Shopify store | `w3nidi-ny.myshopify.com` |
| Product list for Meta (Step 6) | `https://studiomacon.co/meta-catalog.csv` |
| Product list for Google (Step 8) | `https://studiomacon.co/google-products.xml` |
| Old Wix catalog (to retire, Step 13) | `Wix Catalog for 749cc443…` |

# WHAT CLAUDE ALREADY DID

- Put the same Meta Pixel and Google tags on the new site. They only switch on at studiomacon.co, so our test site never messes up the numbers.
- The site tells Meta and Google when someone looks at a piece, adds it to the bag, starts checkout, or sends a message.
- Copied Meta's “this domain is ours” code from Wix, so the domain stays verified.
- Made the two product lists (Steps 6 & 8). They list every piece and ring size with its price, stock, page and photos, and update whenever the site does.
- Named every product the exact way Shopify's apps do, so a sale gets credited to the right ad.

Stuck on any step? Take a screenshot of what you see and send it to Claude.
